

Three-Tab Shingle Construction

Three-tab shingles are the roofing industry's standard, consisting of two layers of asphalt around a Fiberglas® mat core covered with ceramic mineral granules, notched into three integrated pieces, or tabs.

Owens Corning Three-Tab Shingle

1. Shingle sealant
2. Mineral surface granules
3. Weathering-grade asphalt
4. Fiberglas® mat
5. Weathering-grade asphalt

Laminated Shingle Construction

Laminated shingles are created by bonding two asphalt shingles together, giving them a distinct three-dimensional appearance. Laminates are generally heavier in weight, and allow for greater design flexibility.

Owens Corning Laminated Shingle

1. Shingle sealant
2. Mineral surface granules
3. Weathering-grade asphalt
4. Fiberglas® mat
5. Weathering-grade asphalt
6. Mineral surface granules
7. Weathering-grade asphalt
8. Fiberglas® mat
9. Weathering-grade asphalt
